

# FileD

File diagnosis solution which provides security against malicious files by analyzing and quarantining

- Aids risk management
- Reduces ransomware and other malware risks
- Enhances OT + ICS + IT security

**Figure: System configuration of the proposed solution**

FileD can be deployed in the customer's network as a service. Users can upload their files received and get them analyzed before use.

## Features

ML based, Maintains hash of submitted files and Repo of identified malicious files to speed up future analysis, Currently analyzes PE, ELF, PDF, APK, and JS, Unified platform that performs static, dynamic and memory forensics, accuracy Up to 99%, packed and obfuscated malicious file detection.
