

TiS

A threat intelligence system which provides near real time visualization of information about threats and threat actors

- Enhances cyber security risk mitigation
- Provides full visibility, situational awareness and actionable threat intelligence

Figure: System configuration of the proposed solution

Integrates with Network connected critical application servers. Continuously monitors the logs of an integrated application server, analyzes the logs, classifies and notifies the end-user.

Features

Detects various web borne threats with an accuracy up to 99%, ML based, Continuous monitoring, Near real time notification
